AgriEdge Or Mange Ltd – Salesforce-Driven Order Management Solution

Streamlining Agri-Input Sales with a Unified Salesforce Order Management Platform

User story :

AgriEdge Or Mange Ltd is an agri-input business that sells seeds, fertilizers, crop-protection chemicals and farm equipment through farmers, dealers and agri-retail outlets. The AgriEdge Order Management System (AgriEdge OMS) is a Salesforce application that lets sales representatives, sales managers, warehouse managers, administrators and dealers carry out the whole order lifecycle on one connected platform. As a sales representative, I want to onboard customers, look up products along with current prices and available stock, and raise multi-product orders in a single screen, so that I can respond to farmers on the spot instead of relying on paper forms and phone calls. As a sales manager, I want large orders to reach me automatically for approval after the system has checked stock, quantities and customer information, so that I can make quick, well-informed approve-or-reject decisions. As a warehouse manager, I want a ready list of approved orders that I can pick and dispatch, with inventory adjusting itself afterwards, so that stock counts stay trustworthy and no delivery slips. As an administrator, I want to maintain customer, product, pricing and user data in one place, so that the company's information is always correct and current. I also want dashboards and reports covering orders, revenue, product demand, stock position and pending approvals, so that decisions on sales, procurement and logistics rest on facts.

1. INTRODUCTION

1.1 Project Overview :

AgriEdge OMS gives AgriEdge Or Mange Ltd one Salesforce application that holds customer, product, inventory and order information together, so data is easy to find, workflows follow a fixed structure and reports can be trusted. Sales teams use it for customer onboarding, order entry, pricing and follow-up, while managers and warehouse staff get a clear picture of order status, stock availability and delivery progress. Automatic order-total calculation, stock updates, task creation, validation checks and approvals keep every order accurate and consistent.

With Salesforce Flows, Approval Processes, Validation Rules, Reports and Dashboards, each step of the order journey, from customer registration and order placement through approval, dispatch and delivery, runs in a controlled and repeatable way. Validation Rules stop zero or negative quantities, orders for products that are out of stock, delivery dates in the past and incomplete records from being saved. Flows take over routine work such as totalling each order, reducing stock, sending confirmations and generating dispatch tasks.

1.2 Purpose:

AgriEdge OMS is intended to replace scattered, manual order handling with a scalable, automated and secure Salesforce solution that makes agri-product sales faster, more accurate and more transparent. In particular, the system provides:

- **Single source for customer and product data:** Customer profiles, product information, stock levels and order history sit together in one place, which cuts duplicates and keying mistakes.
- **Defined order workflow:** Each order moves through set stages (creation, approval, dispatch and delivery), so nothing gets lost or stalls unnoticed.
- **Built-in approvals and validations:** Approval Processes and Validation Rules verify stock, quantities, discounts and mandatory details automatically, removing most manual checking.
- **Clear reporting and oversight:** Reports and Dashboards show managers current order volume, revenue, stock levels and pending approvals at any time.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 Sales Representative	Enter and follow up customer orders quickly	Order information is spread over registers, phone calls and spreadsheets	Processes are manual and the tools are not connected	Frustrated and prone to mistakes
PS-2 Sales Manager	Approve orders and monitor revenue	Approvals take too long and sales figures are frequently wrong	There is no single platform holding the data	Unsure when making decisions
PS-3 Warehouse Manager	Find out which orders to pack and how much stock remains	Order lists and stock figures reach me late	Changes in orders and stock are passed on by hand	Unprepared and out of the loop
PS-4 Customer / Dealer	Place an order and see how it is progressing	I cannot tell if my order is confirmed, packed or dispatched	No automatic tracking or notifications exist	Worried and uninformed

2.2 Empathy Map Canvas

User Persona: Sales Representative

- **Think & Feel:** Concerned about quoting wrong prices, selling items that are out of stock and losing orders. Under pressure to keep accurate records while serving a large number of farmers and dealers.
- **Hear:** Customers complaining that confirmations are late, and managers asking about approvals still pending and the day's sales figures.

- **See:** Piles of registers, loose notes and spreadsheets, with no one place that shows the status of orders or stock.
- **Say & Do:** Checks stock again and again, chases the warehouse and managers by phone, and updates records manually.

2.3 Brainstorming & Idea Prioritization

Step 1: Brainstormed Ideas

- **Spreadsheet automation:** Apply macros and shared workbooks to keep customer, product and order data more uniform.
- **Standalone ordering portal:** Develop a custom web application through which dealers can submit orders online.
- **ERP extension:** Add order and inventory modules to the company's current ERP system.
- **Salesforce-based order system:** Create a single cloud application built on custom objects, Flows, Approval Processes, Validation Rules, Reports and Dashboards.
- **Automated notifications:** Email customers and managers automatically when an order is approved, rejected or shipped.
- **Real-time dashboards:** Provide managers with live views of order volume, revenue, stock and approvals awaiting action.

Step 2: Grouping

Group	Ideas	Description
Manual solutions	Spreadsheet automation	Cheap and fast to set up, yet it still relies on manual updates and invites duplicate entries
Semi-automated solutions	Standalone ordering portal, ERP extension	Automate some steps but usually require separate systems, extensive customization or complicated integration
Fully automated cloud solutions	Salesforce-based order system, automated notifications, real-time dashboards	Automate ordering, approvals, validations, stock updates and reporting from start to finish on one scalable platform

Step 3: Idea Prioritization

Every idea is rated High, Medium or Low against the criteria shown below.

Idea	Impact	Feasibility	Cost Efficiency
Spreadsheet automation	Low	High	High
Standalone ordering portal	Medium	Medium	Low
ERP extension	Medium	Low	Low
Salesforce-based order system	High	High	High
Automated notifications	High	High	High

Idea	Impact	Feasibility	Cost Efficiency
Real-time dashboards	High	Medium	High

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

The journey map traces how a customer and the company's staff move through the order process, from first contact to delivery and follow-up.

Stage 1: Awareness & Registration

- **User Actions:** Finds out about the company's products and signs up as a customer or dealer.
- **Touchpoints:** Company website, sales representative, helpline.
- **Pain Points:** Data is typed in by hand and customer records get duplicated.
- **AgriEdge OMS Solution:** A customer record is created in Salesforce, and validation rules block duplicate or incomplete entries.
- **Emotion:** Curious and optimistic.

Stage 2: Product Selection

- **User Actions:** Looks through seeds, fertilizers and equipment and checks prices and availability.
- **Touchpoints:** Product catalogue, sales representative.
- **Pain Points:** Price lists are out of date and stock availability is unclear.
- **AgriEdge OMS Solution:** A central Product object displays category, unit price and current stock quantity.
- **Emotion:** Interested but hesitant.

Stage 3: Order Request

- **User Actions:** Asks for the chosen products in the required quantities.
- **Touchpoints:** Order form, phone call, email.
- **Pain Points:** Paper registers, lost orders and incorrect quantities.
- **AgriEdge OMS Solution:** Every request is stored as an Order record with Order Items, and validation rules reject invalid quantities and out-of-stock products.
- **Emotion:** Nervous.

Stage 4: Payment

- **User Actions:** Makes an advance or full payment and sends proof of payment.
- **Touchpoints:** Accounts desk, online payment, sales representative.

- **Pain Points:** Payments are tracked manually and confirmation is slow.
- **AgriEdge OMS Solution:** The Payment Status field on the order is kept up to date automatically.
- **Emotion:** Careful.

Stage 5: Approval

- **User Actions:** Waits for a high-value order to be reviewed and approved.
- **Touchpoints:** Sales representative, sales manager.
- **Pain Points:** Approvals get stuck and nobody can see where the order stands.
- **AgriEdge OMS Solution:** An Approval Process sends the order to the sales manager and triggers automatic notifications.
- **Emotion:** Restless and unsure.

Stage 6: Dispatch & Delivery

- **User Actions:** Gets an order confirmation while the warehouse packs and ships the goods.
- **Touchpoints:** Warehouse manager, delivery partner.
- **Pain Points:** Stock is updated by hand and dispatch details arrive late.
- **AgriEdge OMS Solution:** A Flow reduces stock, moves the order to its next status and creates a dispatch task.
- **Emotion:** Reassured.

Stage 7: Reporting & Follow-up

- **User Actions:** Receives the goods and shares feedback while management reviews results.
- **Touchpoints:** Dashboards, reports, sales representative.
- **Pain Points:** Reporting is slow and unreliable.
- **AgriEdge OMS Solution:** Reports and Dashboards follow order volume, revenue, stock and pending approvals.
- **Emotion:** Satisfied and assured.

3.2 Solution Requirements

Functional Requirements

FR-1: Customer Management

- **Description:** Maintain customer records.
- **Details:** Create, edit and view customer profiles that include contact information, location, customer type (Farmer, Dealer, Retailer) and order history. Validation rules stop duplicate and incomplete records from being saved.

FR-2: Product & Inventory Management

- **Description:** Create and maintain products and their stock.
- **Details:** Record product name, category, unit price, stock quantity and status. Stock is adjusted automatically when orders are approved and dispatched.

FR-3: Order Processing

- **Description:** Raise, approve and reject orders.
- **Details:** Sales representatives build orders containing several order items, and high-value orders go through an Approval Process. Validation rules reject invalid quantities, out-of-stock items and delivery dates in the past, while notifications keep all parties informed.

FR-4: Order Fulfilment Automation

- **Description:** Automate totals, stock deduction and dispatch.
- **Details:** A Flow works out the order total, reduces stock when an order is approved and creates dispatch tasks for the warehouse team.

FR-5: Reporting

- **Description:** Reports and dashboards.
- **Details:** Monitor order volume, revenue, product demand, stock levels and pending approvals as they change.

Non-Functional Requirements

NFR-1: Security

- **Description:** Safeguard customer and order data.
- **Details:** Profiles, roles and permission sets limit each user to the information their job requires.

NFR-2: Usability

- **Description:** A simple, uniform user experience.
- **Details:** Tidy Lightning App pages, page layouts and record views that sales and warehouse staff can pick up with little training.

NFR-3: Performance

- **Description:** Quick handling of order transactions.
- **Details:** Records, approvals and reports open quickly, including during the busy sowing and harvest seasons.

NFR-4: Scalability

- **Description:** Accommodate growth in customers and products.
- **Details:** The cloud platform copes with rising data volumes and user numbers without needing a redesign.

NFR-5: Reliability and Availability

- **Description:** Dependable system access.
- **Details:** The Salesforce cloud platform offers high uptime together with automatic data backup.

NFR-6: Data Accuracy

- **Description:** Consistent and correct data.
- **Details:** Validation rules, required fields and automation lower the chance of manual errors.

3.3 Data Flow Diagram

The Level-1 data flow diagram below shows the main processes of the system.

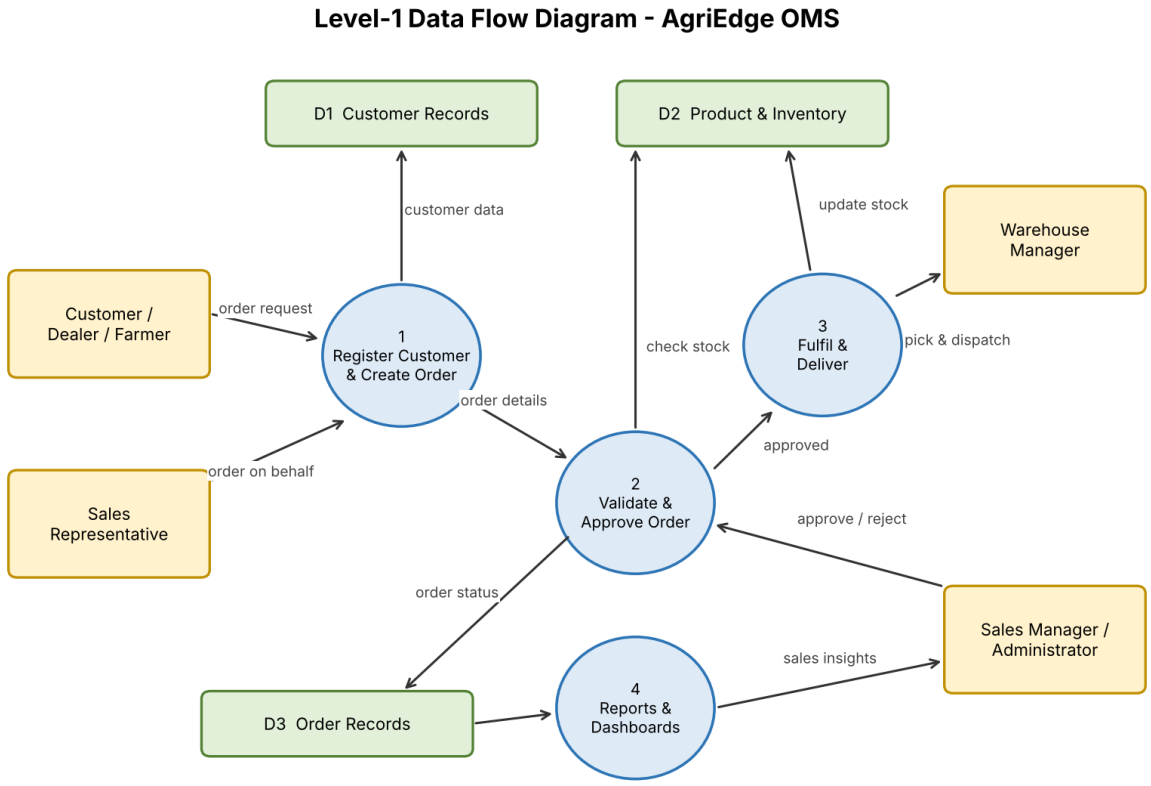

Figure 3.1: Level-1 Data Flow Diagram – AgriEdge OMS

The diagram maps to the steps as follows:

- **Step 1, input:** The customer, or a sales representative acting for them, sends customer and order details to process 1.
- **Step 2, validation and storage:** Process 1 verifies the data and stores it in D1 (customer records). Process 2 checks the stock held in D2 and records the order status in D3.
- **Step 3, approval routing:** Process 2 forwards every high-value order to the sales manager, gets the approve or reject decision back and then updates the order status in D3.

- **Fulfilment:** Process 3 picks up approved orders, passes the pick list to the warehouse manager and updates the stock in D2.
- **Step 4, reports and dashboards:** Process 4 reads the processed order data in D3 and supplies the reports and dashboards.

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

AgriEdge OMS tackles disconnected order workflows by matching user behavior and constraints with Salesforce-native automation features.

Problem Statement

Agri-input businesses like AgriEdge Or Mange Ltd frequently handle customer registration, order entry, approvals and stock in separate registers, phone conversations and spreadsheets. The result is duplicated records, inaccurate stock figures, late confirmations and no consolidated view of sales. Sales staff lose time on manual verification, managers cannot see what is happening, and customers wait for news about their orders.

Problem–Solution Mapping

Problem (User Behavior / Constraint)	AgriEdge OMS Solution	Salesforce-Native Capability
Customer and order details spread over registers and notes	One central set of customer, product and order records	Custom objects (Customer, Product, Order, Order Item) linked by relationships
Wrong or incomplete data being entered	Data verified as soon as it is entered	Validation rules and required fields
Duplicate customers, or orders placed for products that are out of stock	Duplicate and invalid orders rejected automatically	Duplicate rules and validation logic
Approvals that are slow and handled manually	Orders sent to the correct approver, who can approve or reject in one click	Approval Processes and Flow automation
Totals worked out and stock changed by hand	Totals and stock levels updated automatically	Record-triggered Flows and roll-up summary fields
Sensitive records visible to the wrong people	Each user sees only what their role allows	Profiles, permission sets, roles and sharing rules
Order progress cannot be seen	Live status tracking and management reports	Reports and Dashboards
Each type of user has different needs	Interfaces tailored to sales, warehouse and admin users	Lightning App pages and Lightning record pages

4.2 Proposed Solution

Parameter	Description
Problem	Orders handled by hand through registers, calls and spreadsheets, causing duplicate records, stock mistakes, slow approvals and unclear order status.
Solution	AgriEdge OMS on Salesforce, covering customer registration, order creation, approvals, stock updates and reporting on a single platform.
Novelty	Complete automation of validation, approval routing, total calculation and stock updates using only Salesforce-native tools (Flows, Approval Processes, Lightning).
Social Impact	Farmers and dealers get quicker service, reliable order status and timely delivery of seeds and fertilizers, which helps them plan their crops better.
Revenue Model	Institutional deployment through licensing, implementation and support services for agri-input companies and distributors.
Scalability	Works across multiple regions; new products, dealers and users can be added without redesign.

4.3 Solution Architecture

The architecture brings together Salesforce objects, automation flows, approval processes, dashboards and security layers. Users work through the Lightning interface, automation handles their requests, and the outcomes are saved in custom objects, with a security layer controlling access throughout.

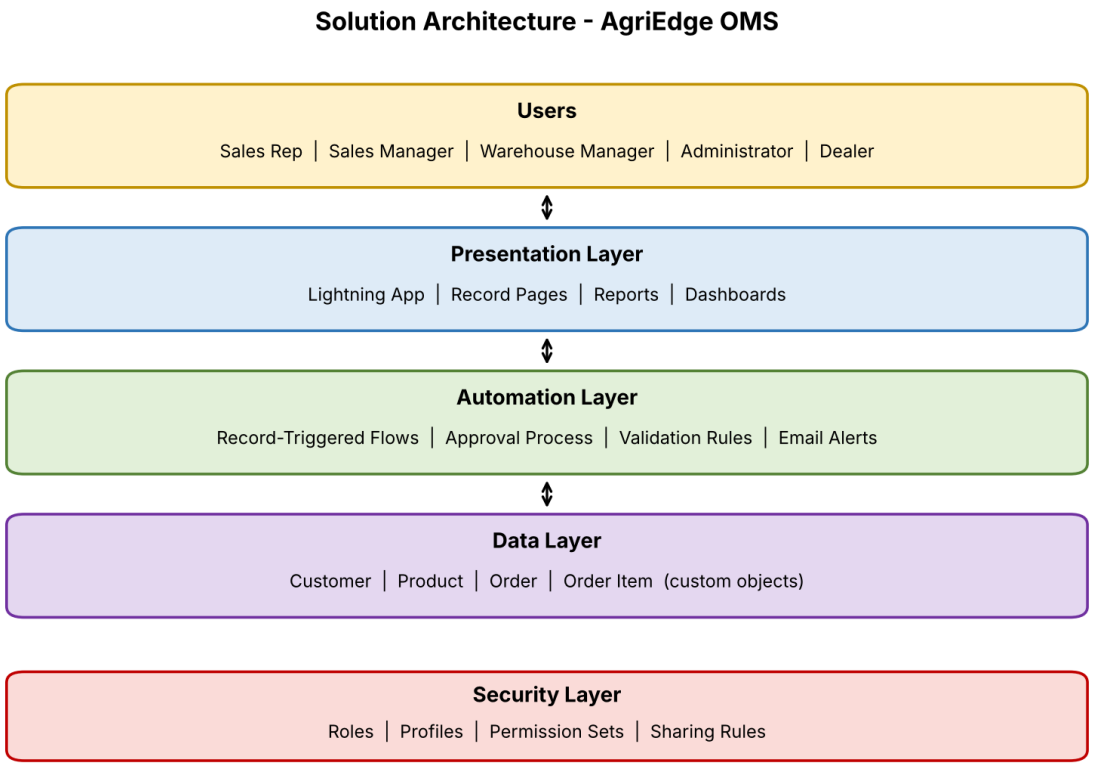

Figure 4.1: Solution Architecture – AgriEdge OMS

The layers work together as follows:

- **Users:** Sales representatives, sales managers, warehouse managers, administrators and dealers each see a view suited to their role.
- **Presentation layer:** The Lightning app, record pages, reports and dashboards provide a straightforward interface.
- **Automation layer:** Flows, approval processes, validation rules and email alerts take care of checks, routing and stock updates.
- **Data layer:** The Customer, Product, Order and Order Item objects store all records and the relationships among them.
- **Security layer:** Roles, profiles, permission sets and sharing rules are enforced across every layer, so users can open only the records they are entitled to.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project is run using the Agile methodology. Work is broken down into Epics → User Stories → Story Points and delivered sprint by sprint, with the velocity of finished sprints used to forecast what remains.

Product Backlog and Sprint Schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Developer Setup	USN-1	As a system administrator, I want to set up a Salesforce developer account so that I can build and deploy the AgriEdge order management system.	1	High	Member1
Sprint-1	Data Modeling	USN-2	As an admin, I want to create custom objects for Customer, Product, Order and Order Item so that business data is stored and handled efficiently.	3	High	Member2
Sprint-2	Data Modeling	USN-3	As a user, I want a dedicated tab for each object so that I can move easily between customers, products, orders and order items.	3	High	Member3
Sprint-2	Data Modeling	USN-4	As an admin, I want to add suitable fields such as customer details, product price, stock and order status so that records capture complete and accurate information.	5	High	Member4
Sprint-2	Data Modeling	USN-5	As a sales representative, I want one Lightning App so that I can reach every order function from a single interface.	3	High	Member4
Sprint-2	Data Modeling	USN-6	As an admin, I want to set up relationships among customers, orders, order items and products so that the system can connect and trace sales activity.	5	Medium	Member1

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Data Modeling	USN-7	As a user, I want tailored page layouts that show only relevant information so that data entry is clearer and easier.	5	High	Member2
Sprint-3	Automation	USN-8	As a system, I want to check input such as mandatory fields, quantities and stock availability so that wrong or incomplete records cannot be saved.	3	High	Member4
Sprint-3	Automation	USN-9	As a system, I want automated flows to compute totals, update stock and send notifications so that manual work drops and processing speeds up.	3	High	Member4
Sprint-3	Automation	USN-10	As a sales manager, I want an approval process for high-value orders so that they are checked before being confirmed.	5	High	Member1
Sprint-4	Security	USN-11	As an admin, I want to set up role-based security so that users can reach only the data that fits their responsibilities.	5	High	Member2
Sprint-5	Reports	USN-12	As a manager, I want reports on orders, product demand and stock levels so that I can keep track of sales operations.	4	High	Member3
Sprint-6	Dashboards	USN-13	As a manager, I want visual dashboards of order statistics and trends so that I can assess business performance at a glance.	4	Medium	Member4

Epic Summary

Epic	Stories	Story Points
Developer Setup	USN-1	1
Data Modeling	USN-2 to USN-7	24
Automation	USN-8 to USN-10	11
Security	USN-11	5
Reports	USN-12	4
Dashboards	USN-13	4
Total	13 stories	49

Sprint Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date
Sprint-1	4	7 days	5 Oct 2026	11 Oct 2026	4	11 Oct 2026
Sprint-2	21	7 days	12 Oct 2026	18 Oct 2026	21	18 Oct 2026
Sprint-3	11	7 days	19 Oct 2026	25 Oct 2026	11	25 Oct 2026
Sprint-4	5	7 days	26 Oct 2026	1 Nov 2026	5	1 Nov 2026

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed	Sprint Release Date
Sprint-5	4	7 days	2 Nov 2026	8 Nov 2026	4	8 Nov 2026
Sprint-6	4	7 days	9 Nov 2026	15 Nov 2026	4	15 Nov 2026
Total	49	42 days			49	

Team Workload

Member	Stories	Total Story Points
Member1	USN-1, USN-6, USN-10	11
Member2	USN-2, USN-7, USN-11	13
Member3	USN-3, USN-12	7
Member4	USN-4, USN-5, USN-8, USN-9, USN-13	18

6. Project Development Phase

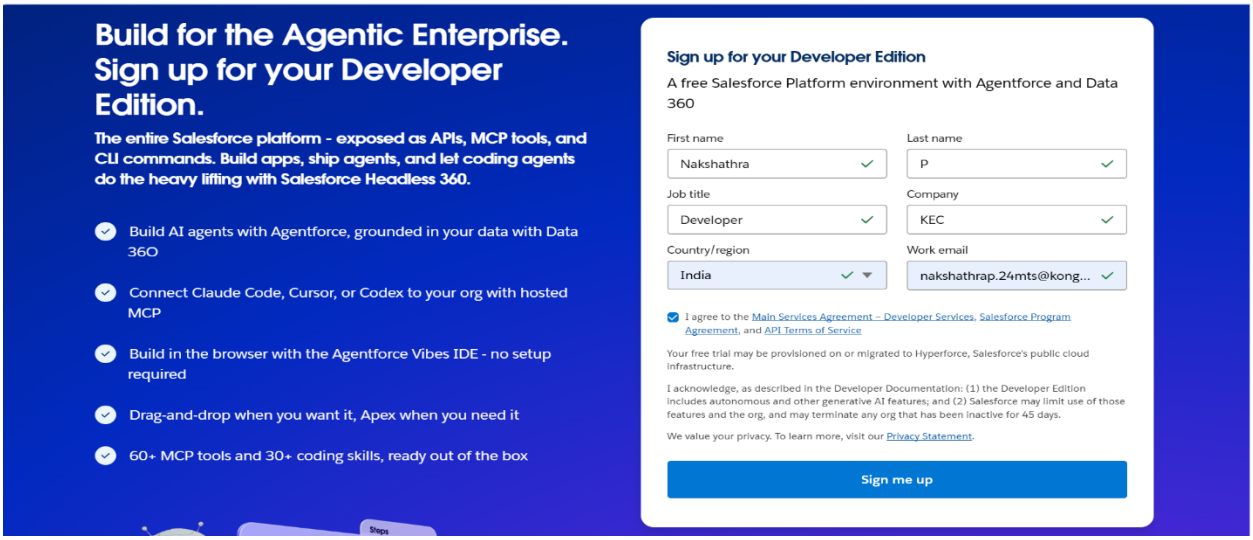

Milestone 1: Salesforce Developer Account Creation

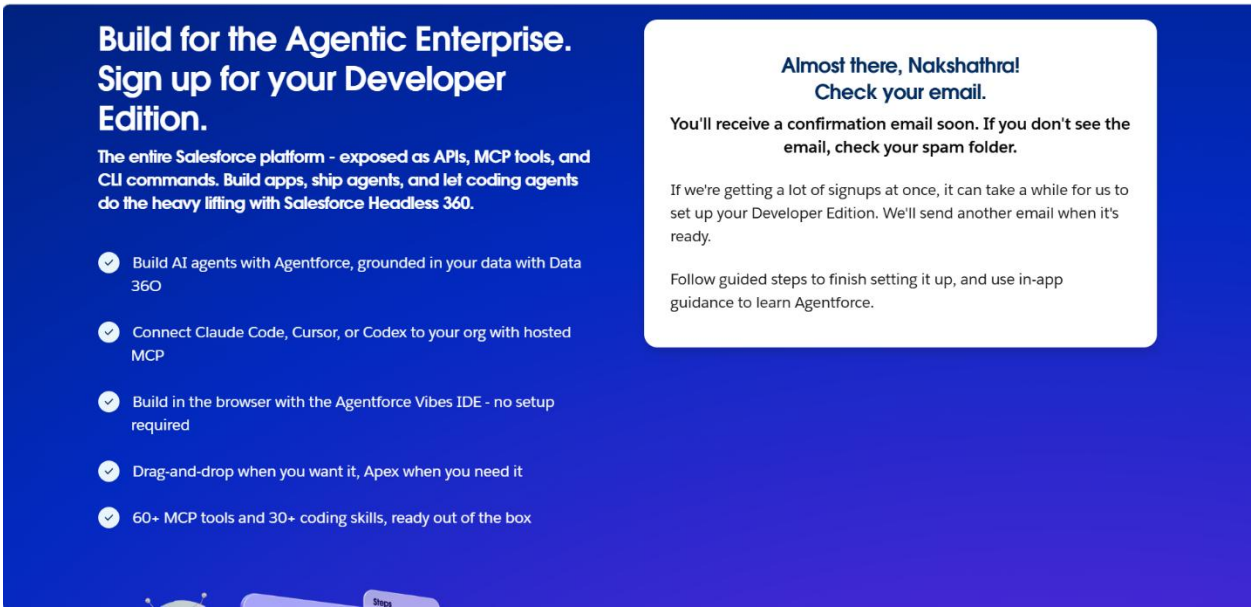

Definition: A free Salesforce Developer Edition org serves as the workspace where the complete AgriEdge OMS is built, tested and demonstrated, giving full platform access with no effect on any live production system.

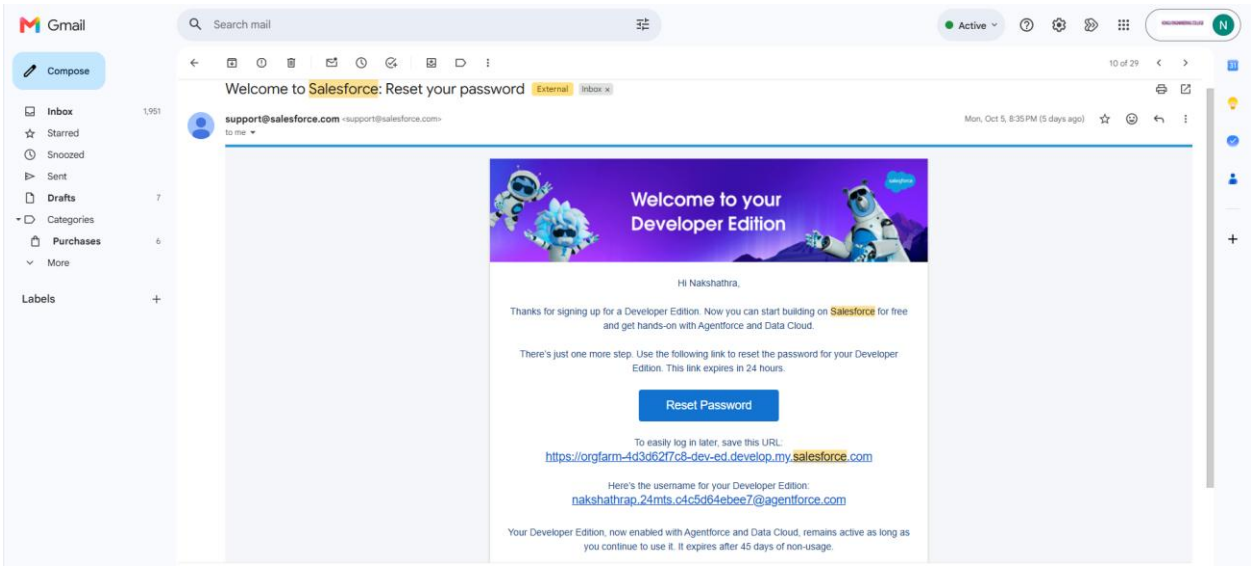

Key steps:

- Register at developer.salesforce.com/signup
- Confirm the email address and create a password
- Sign in and go to Setup

Screenshots:

Milestone 2: Custom Object Creation (Customer, Product, Order, Order Item)

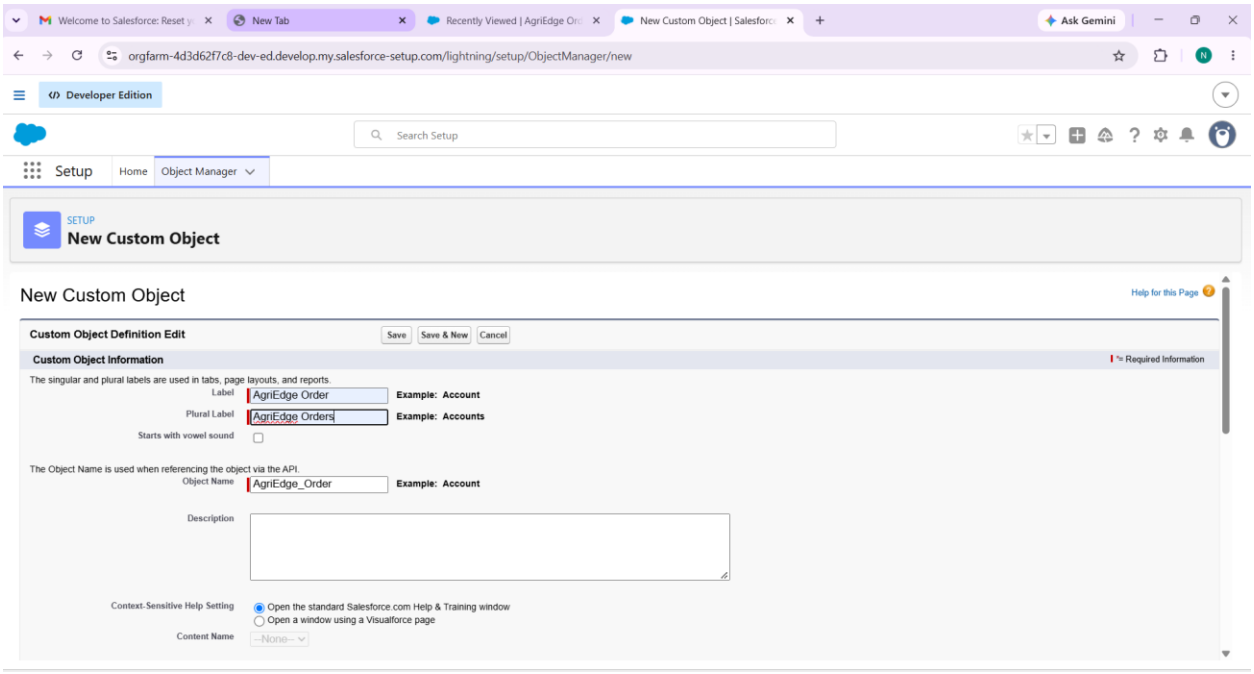

Definition: A custom object works like a database table in Salesforce. Four objects hold the core business data: Customer (farmer, dealer or retailer), Product (seeds, fertilizers, equipment), Order (the sales order) and Order Item (a line connecting an order to a product, with quantity and price).

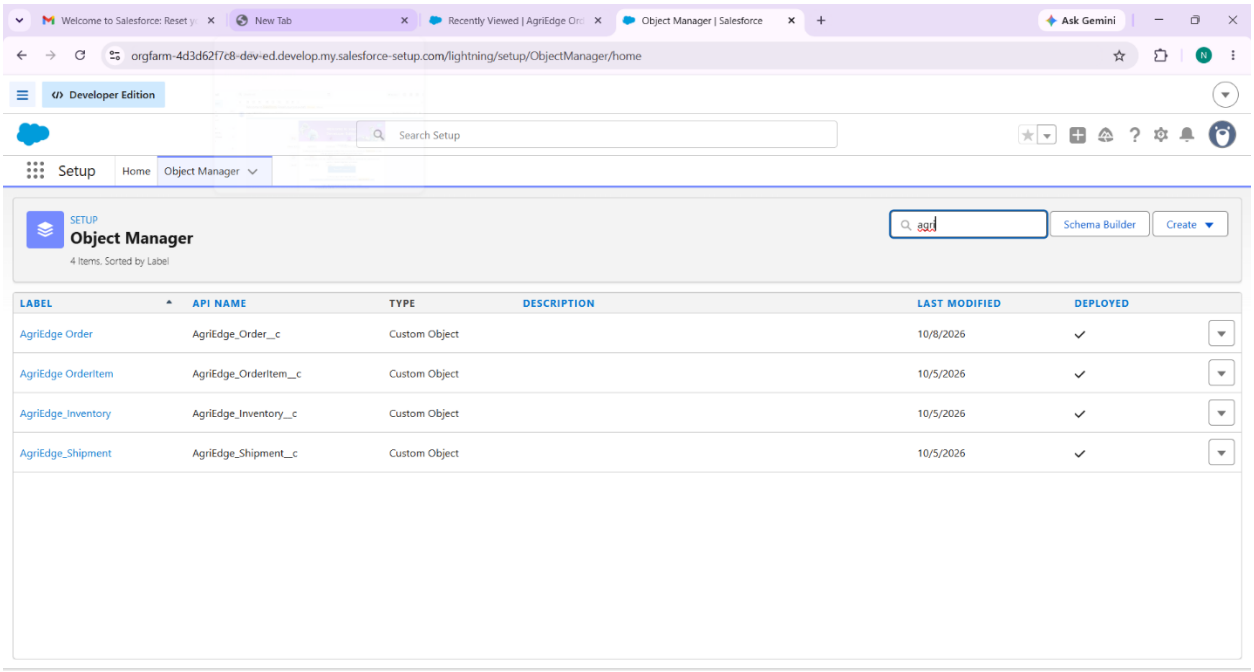

Key steps:

- Setup > Object Manager > Create > Custom Object
- Fill in the label, plural label and record name (use Auto Number for Order and Order Item)

- Select Allow Reports, Allow Search and Launch New Custom Tab Wizard

Screenshots:

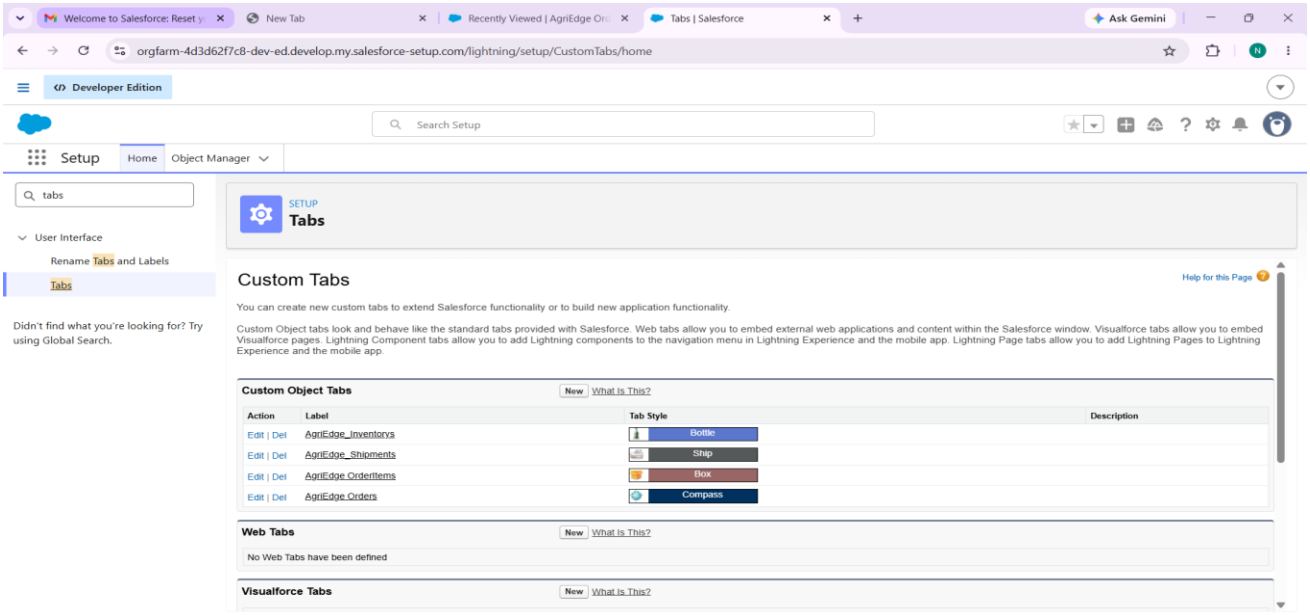

Milestone 3: Tabs Creation

Definition: A tab is a navigation shortcut that opens the list of records for an object. Dedicated tabs let users switch quickly among customers, products, orders and order items.

Key steps:

- Setup > Tabs > Custom Object Tabs > New
- Pick the object and a tab style
- Set profile visibility and include the tab in the relevant apps

Screenshots:

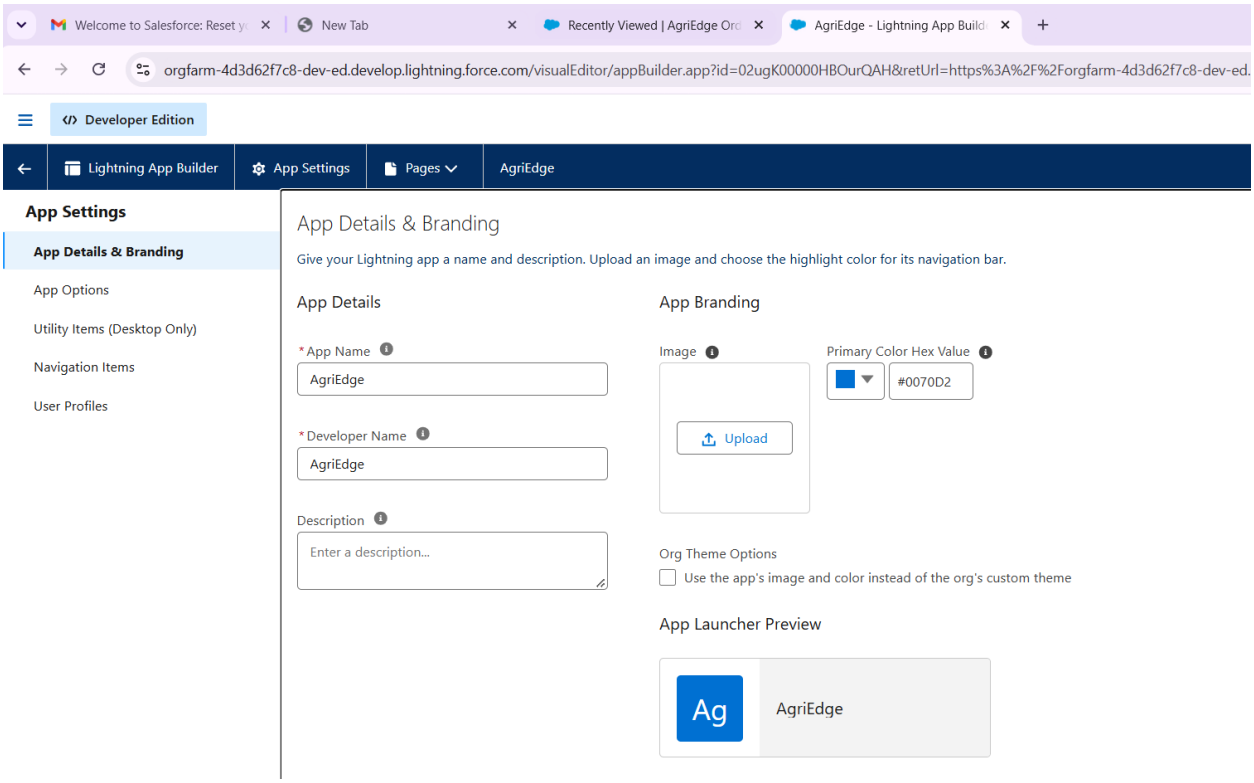

Milestone 4: Lightning App Creation

Definition: A Lightning App bundles tabs and utilities into one branded workspace. The AgriEdge OMS app gives sales teams a single interface for every order task.

Key steps:

- Setup > App Manager > New Lightning App
- Enter the app name, branding and navigation style
- Include the four object tabs along with Reports and Dashboards
- Give the app to the required user profiles

Screenshots:

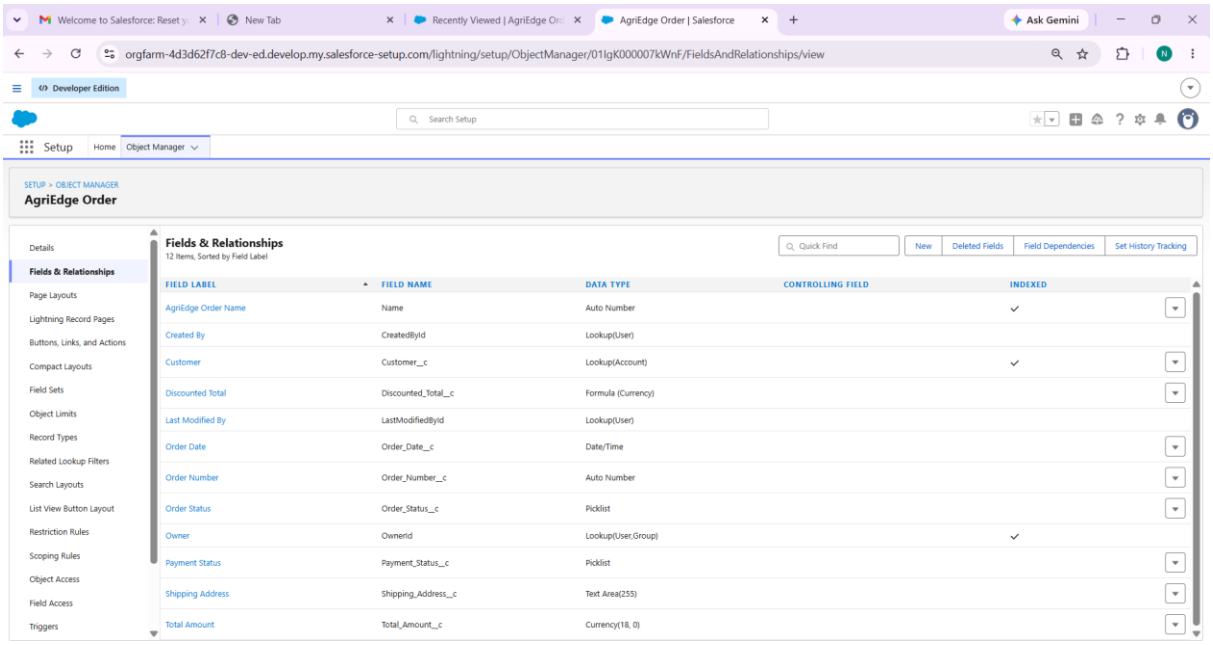

Milestone 5: Fields Creation

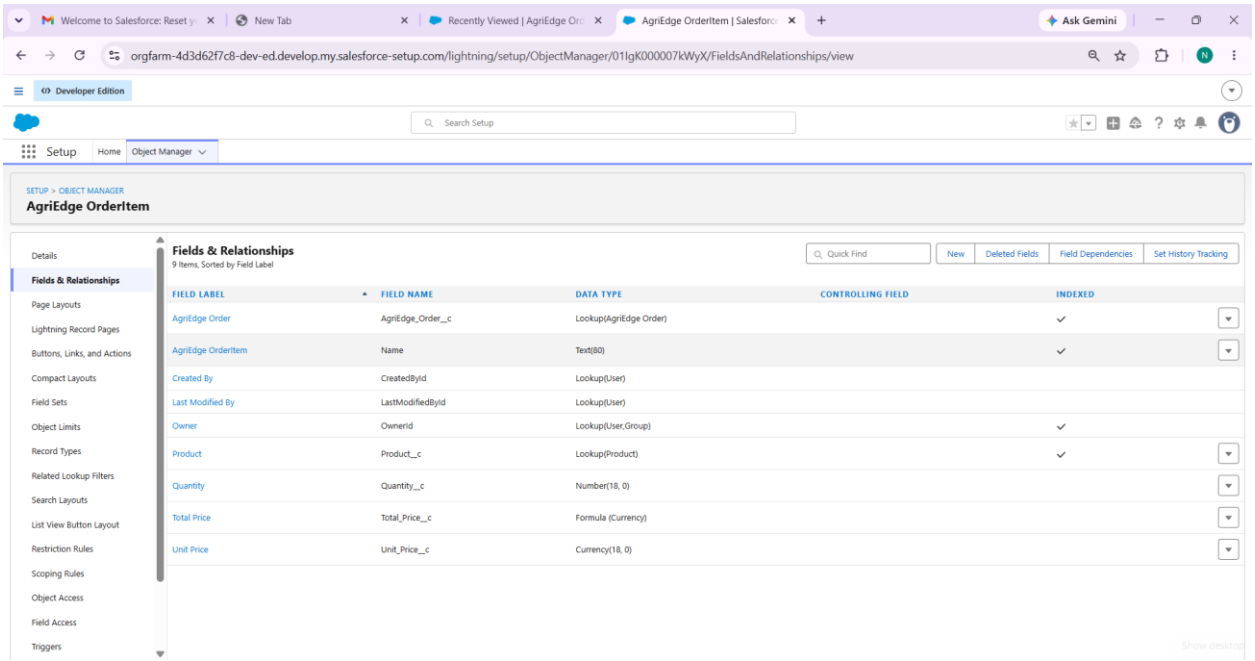

Definition: Fields are the columns of an object, each storing a single piece of data, and together they record customer details, product information and order status accurately.

Key steps:

- Object Manager > (object) > Fields & Relationships > New
- Select the data type (Text, Email, Phone, Date, Currency, Number, Picklist)
- Enter the field name, mark it required if needed, and define picklist values for Order Status such as Draft, Submitted, Approved, Rejected, Dispatched and Delivered
- Set field-level security and place the field on page layouts

Screenshots:

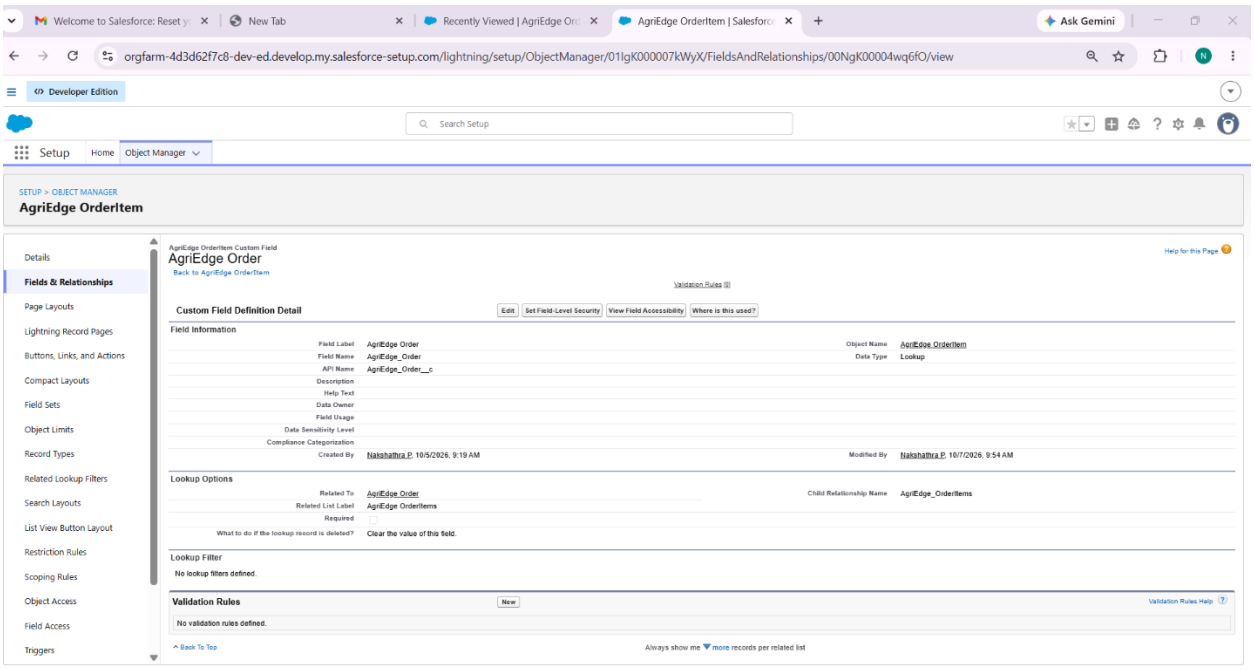

Milestone 6: Create Relationships

Definition: Relationships connect records of different objects. A Lookup field links Order to Customer, a Master-Detail field links Order Item to Order, and a Lookup field links Order Item to Product, which makes roll-up totals and activity tracking possible.

Key steps:

- Add a Lookup field on Order that points to Customer
- Add a Master-Detail field on Order Item that points to Order
- Add a Lookup field on Order Item that points to Product
- Add a roll-up summary field on Order to sum the Order Item line amounts
- Confirm that related lists appear on the parent records

Screenshots:

Milestone 7: Validation Rules

Definition: A validation rule is a formula that blocks a record from being saved when data is wrong or incomplete, for example a missing mandatory field, a zero or negative quantity, a past delivery date, or an order quantity higher than the available stock.

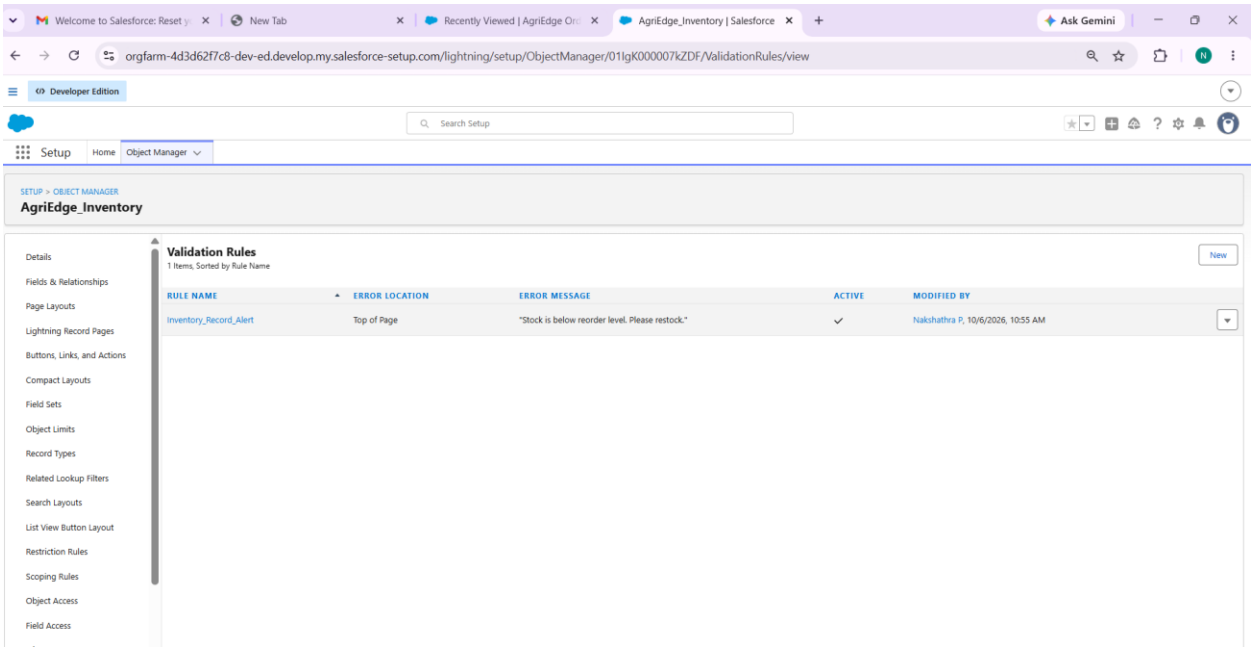

Key steps:

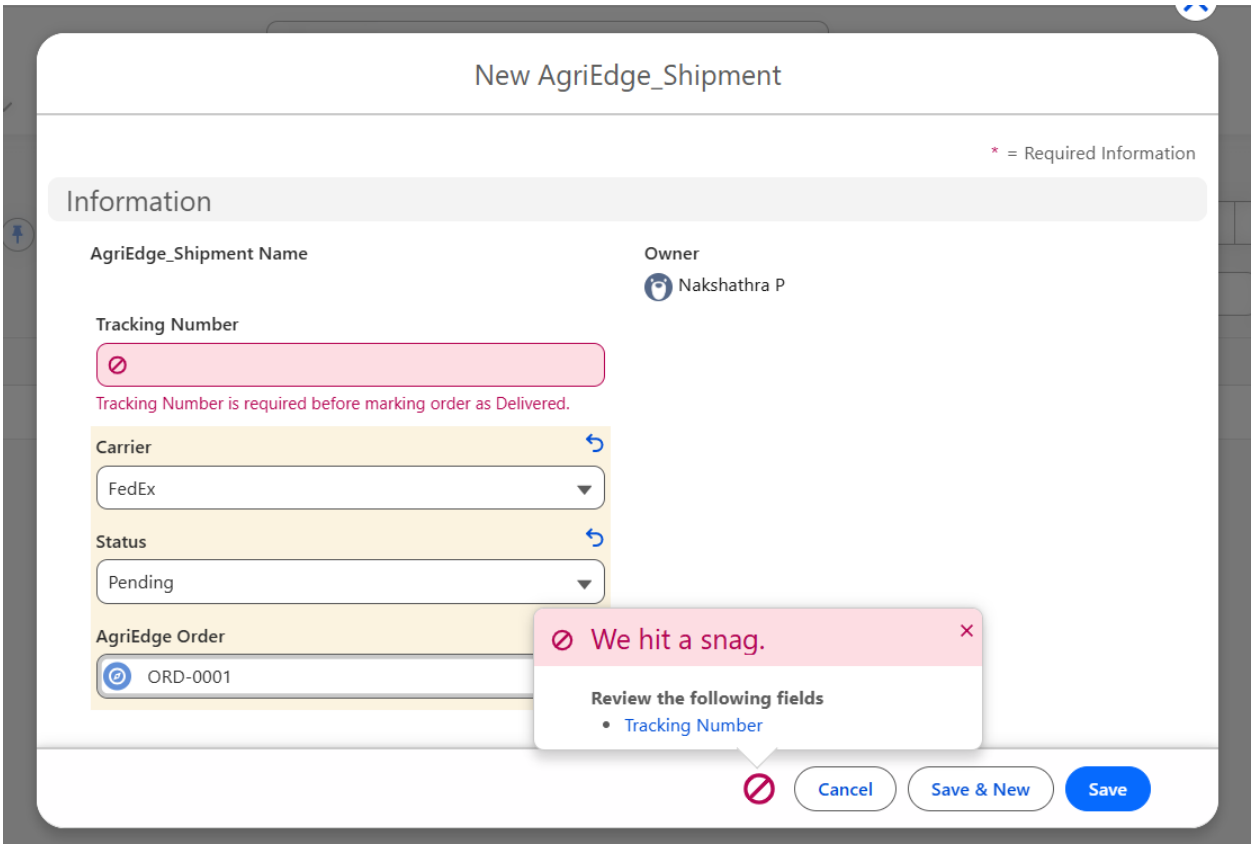

• ObjectManager>(object) > Validation Rules > New

• Write the error condition formula, for example Quantity__c <= 0 on Order Item and Delivery_Date__c < TODAY() on Order

- Enter the error message and choose where it appears
- Activate and test with invalid data

Screenshots:

Milestone 8: Users

Definition: Usersareindividualswhohaveaccesstothe Salesforcesystemtomanageandprocessrecords. In the AgriEdge Order Management Solution, users are assigned appropriate profiles, roles, and permissions to perform tasks such as managing customer orders, updating order status, and tracking shipments.

Key steps:

• NavigatetoSetup →Users→Users→NewUser.

• Enter the user's name, email address, and username.

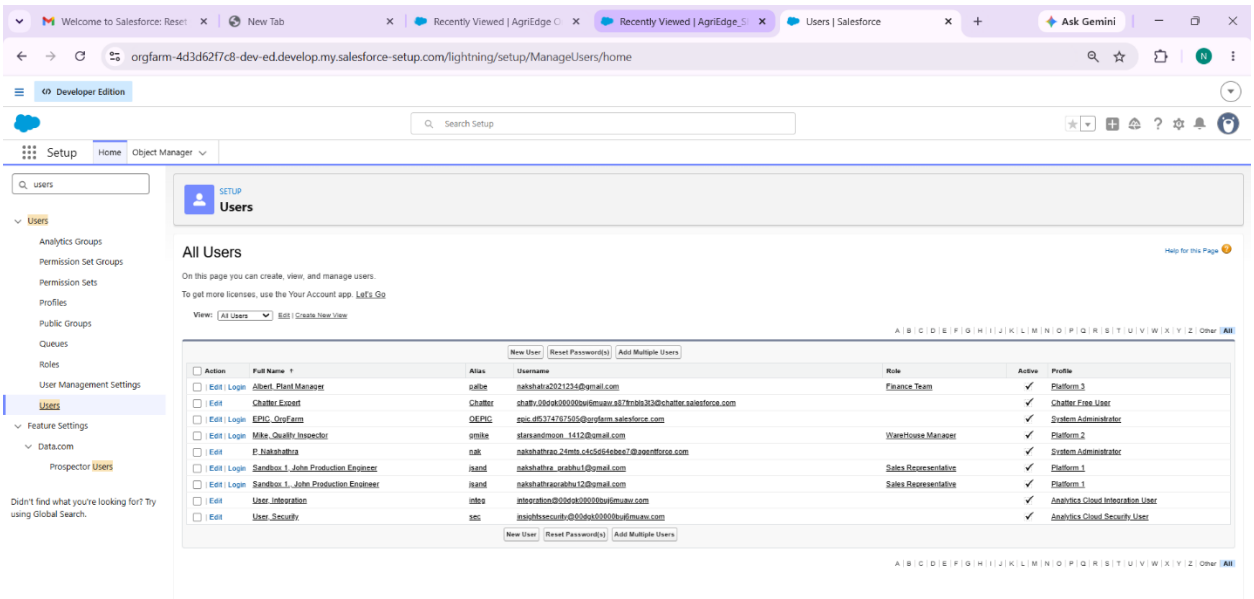

• Assign the appropriate user license and profile.

• Configure roles and permission sets based on job responsibilities.

• Activate the user account and save the details.

• Verify that users can access only the objects, records, and features permitted for their roles.

Screenshots:

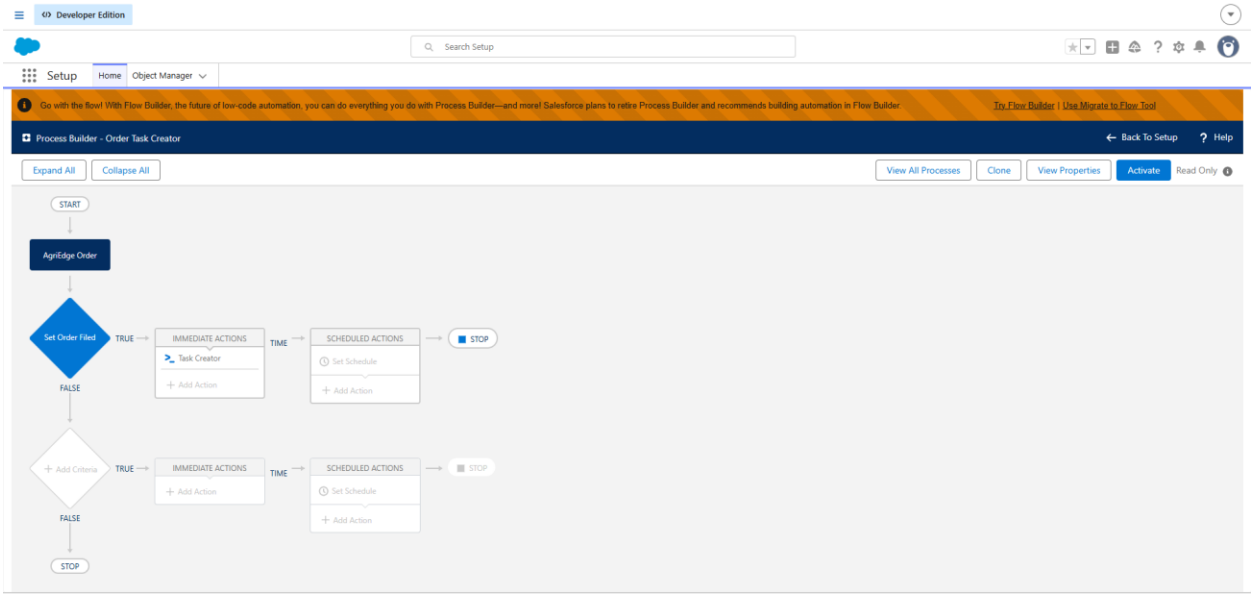

Milestone 9: Flows (Automation)

Definition: Flow is Salesforce's declarative automation tool. Record-triggered flows work out order totals, send confirmation notifications, reduce stock and create dispatch tasks without manual effort.

Key steps:

- Setup > Flows > New Flow > Record-Triggered Flow
- Select the object (Order or Order Item) and the trigger condition
- Add decision, update, create-task and email-alert elements
- Save, activate and test the flow

Screenshots:

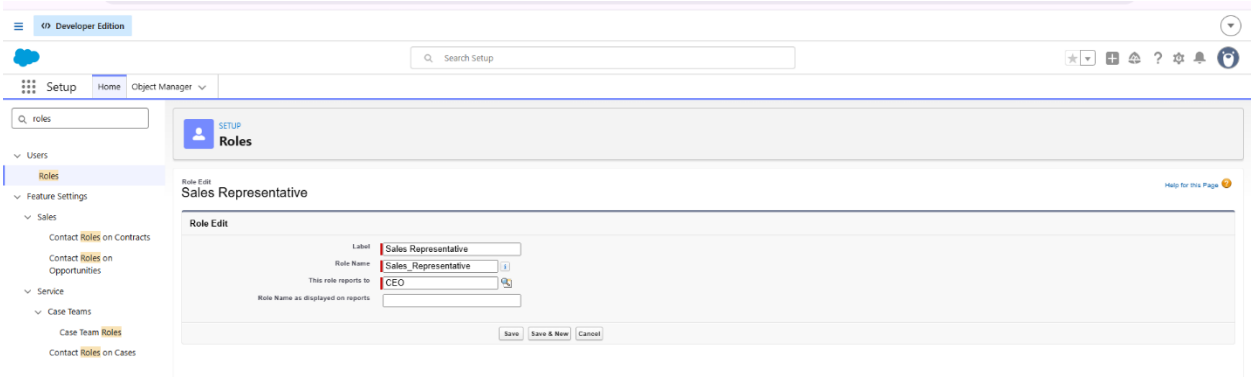

Milestone 10: Security Setup

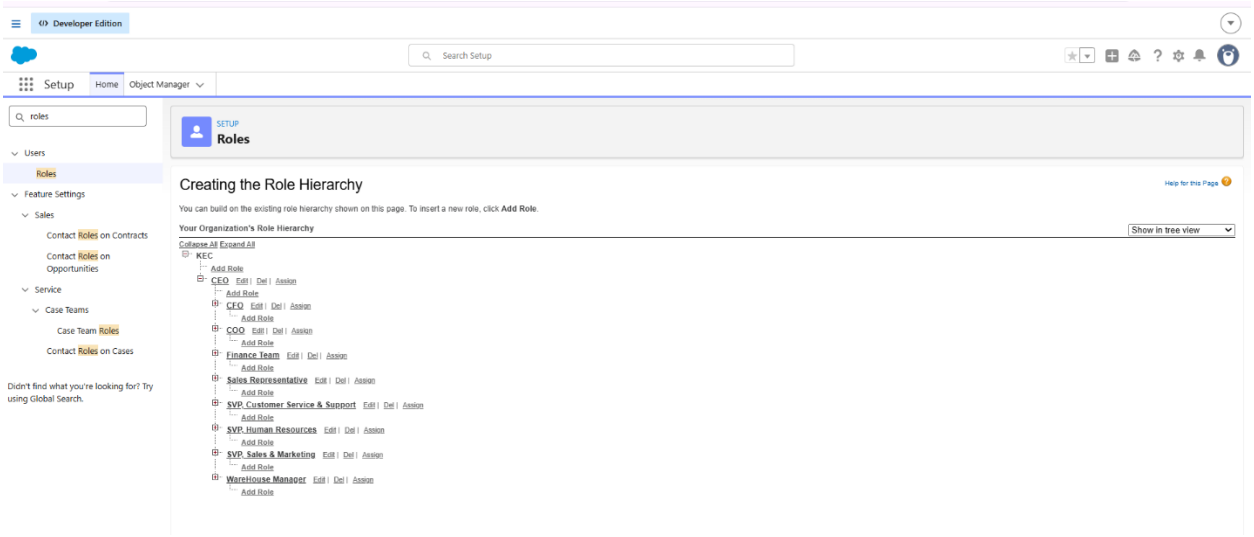

Definition: Security determines who can view and edit what. Roles, profiles, permission sets and sharing rules make sure users reach only the data that relates to their duties.

Key steps:

- Set up roles (Admin, Sales Manager, Sales Representative, Warehouse Manager) in the role hierarchy
- Configure profiles and permission sets for object and field access
- Define organization-wide defaults and sharing rules
- Verify the setup using Login As

Screenshots:

Milestone 11: Conclusion

Project Summary

AgriEdge OMS, the Salesforce-based order management system for AgriEdge Or Mange Ltd, takes the place of the registers, phone calls and spreadsheets that once kept the order process running. Customer registration, order entry, approvals, stock updates and reporting now sit on one Salesforce platform, giving everyone a single source of truth.

Outcomes and Benefits

- **Efficiency:** Far less manual entry, approval chasing and stock reconciliation.
- **Accuracy:** Validation cuts down duplicate, missing and inconsistent records.
- **Speed:** Automated totals, approvals and stock updates reduce order turnaround time.
- **Transparency:** Stakeholders check live status on dashboards rather than asking around.
- **Accountability:** Each record, approval and change can be traced within a single system.
- **Scalability and maintainability:** Since it relies on standard Salesforce features instead of extensive custom code, new products and regions can be added by configuration, and administrators can maintain it without specialist developers.

Possible Future Enhancements

- **Dealer portal:** an Experience Cloud site, for example, offering self-service ordering, status tracking and invoice downloads
- **Mobile access:** via the Salesforce mobile app for field sales staff visiting farms
- **Automated reminders:** email or SMS alerts for payment dues, dispatch updates and seasonal repeat orders
- **Advanced analytics:** such as seasonal and regional demand forecasting and stock planning

- **Integrations:** with an ERP, payment gateway, logistics tracking, or weather and crop-advisory services
- **Apex-based customization:** for intricate pricing, discount and bulk-order logic
- **Expansion:** to more product lines, warehouses and regions on the same framework

AgriEdge OMS meets its main goals: a single platform, cleaner data, quicker approvals, automatic stock updates and live reporting. Its configuration-first, native design provides the organization with a strong base for future growth.
